The Honorable Rodney Frelinghuysen
Chairman, House Appropriations Committee

The Honorable Nita Lowey
Ranking Member, House Appropriations Committee

The Honorable Robert Aderholt
Chairman, House Agriculture, Rural
Development, Food and Drug Administration, and Related Agencies Appropriations Subcommittee

The Honorable Sanford Bishop
Ranking Member, House Agriculture, Rural
Development, Food and Drug Administration, and Related Agencies Appropriations Subcommittee

Dear Chairmen and Ranking Members,

We write as a coalition of organizations from the food, agriculture, scientific, academic, veterinary, and consumer communities to urge you to substantially increase the discretionary budget cap for domestic programs and provide an allocation for the FY 2018 Agriculture Appropriations bill of 5 percent of the total domestic discretionary budget cap increase.

The food and agricultural sector alone contributes nearly $1 trillion to the national economy every year, or approximately 5.5% of the nation’s GDP. This sector supports over 22 million American jobs, or nearly 15% of U.S. employment. This segment of our economy is the best example of how the combination of technology, ingenuity, and hard work have made our country the strongest force for improving the lives of billions of people here and around the world.

However, more support is needed if we are to maintain our historic leadership in this area. If the budget caps are raised, additional agricultural investment should be a top priority within the final omnibus bill. We believe that the Agriculture Appropriations Subcommittees are currently hamstrung by a discretionary allocation that is not commensurate with the importance of this sector to the daily lives of Americans. This is a challenge that can only be remedied by leadership on both sides of Capitol Hill, and by the full Appropriations Committees.

The USDA and FDA bill is the smallest of all the appropriations bills, save for the legislative appropriation. The success of the American farm and food system has made it possible for the consistent transfer of resources into other sectors. Since FY 2010, the inflation-adjusted agricultural appropriations budget has fallen by 20 percent, while most other allocations have grown or not faced the same dramatic cuts. These reductions pose immediate and long-term threats to our production, natural resources, and ability to lead on an increasingly competitive global stage, which is why the trend of declining investment must be reversed now. The marginal value of this extra funding to promote science, rural development, and the economic health of agriculture far outweighs the last dollars of spending in many other areas and these investments will improve food security and national security.

Thank you for your leadership and for your continued support of this vital sector of our nation’s economy. We look forward to informing you and your colleagues about the importance of agriculture as we move ahead in the FY 2018 appropriations process, as well as FY 2019 and beyond.
Sincerely,
